

Does your small farm/acreage need help from a farm plan?

1. Does your farm experience mud or manure accumulation after only a small amount of precipitation? Yes No
2. Do you have bare patches in your pasture? Yes No
3. Do you have more manure than you know what to do with? Yes No
4. Does it seem that no matter how much you water an area, you never seem to see beneficial growth? Yes No
5. When watering, do you tend to have standing water in the pasture or soggy, muddy conditions? Yes No
6. Do your animals tend to eat or chew on untypical forages (Examples: Garbage, Tree Bark, Twigs, Branches) Yes No
7. Do you have a weed issue in your pasture? Yes No
8. Do your animals leave areas of your pasture uneaten, yet eat down other areas close to the ground (or uneven grazing)? Yes No
9. Have neighbors ever complained to you regarding your animals? Yes No
10. Do you live adjacent to a water body (Stream, River, Pond, Lake)? Yes No

If you answered yes to three or more of these questions then you might benefit greatly from a farm plan.
