

Could your acreage benefit from a farm plan?

1. Do you apply fertilizers without knowing the nutrient needs for your plants?
 Yes No
2. Do you irrigate crops without a schedule? Yes No
(If you are a Dryland producer you may skip this question)
3. When irrigating your crops do you typically see areas with excess water and areas in the same fields that don't seem to get enough water? Yes No
(If you are a Dryland producer you may skip this question)
4. Do you apply pesticides using an Integrated Pest Management System?
 Yes No
5. Do you typically see dust blowing off of your fields on windy days?
 Yes No
6. Do you manage your farm without thought to reduced diesel use? Yes No
7. Do you manage fields adjacent to residences, schools, or a water body (Stream, River, Pond, Lake)? Yes No
8. Do you find yourself getting inconsistent yields on similarly managed fields?
 Yes No
9. Have neighbors ever complained to you regarding your management practices?
 Yes No
10. Are you interested expanding your management to minimal tillage, integrated pest management or other advanced practices? Yes No

If you answered yes to three or more of these questions then you might benefit greatly from a farm plan.
